

WHEEL SAFE PRO-SERIES

Thank you for purchasing a TRI ALL 3 SPORTS PRO-SERIES WHEEL SAFE. The only hard shell case designed to hold 3 racing wheels; the Pro-Series Wheel Safe is used by Top Triathletes and Olympians worldwide.

A few hints for packing your expensive racing wheels:

1. Place a small hand towel that you borrowed from the last hotel you stayed at on the bottom of the case.
2. Pull the skewers out of your wheel and place the wheels in the case. Make sure you place the rear wheel with the cassette facing the outside of the case. I like to place the rear wheel on the outside channel so the cassette does not scratch the inside wheel. If you are only carrying 2 extra wheels, then you can place both wheels in the outside channels and leave the center open for extra gear. It also makes a good place to store your stinky race clothes for your return trip home.
3. After you have placed your wheels in the case, place the second hand towel that you borrowed from that other hotel across the top of the wheels. This really makes them secure when you place the top on and secure the latches. I also like to put a small Master Lock on the 2 locking latches; this helps to keep the honest guy honest. This case is not considered oversize by the airlines and should fly for free!

Now go out there and have a good race and remember to wear your helmet and the keep the rubber side down!
